Fraktionierer Multifractor 300 von Voith
Artikel-Nr. 6219

Technische Daten:

Maschine:	Fraktionierer Multifractor 300 von Voith
Hersteller:	Voith
Typ:	Multifractor
Größe:	300
Kapazität:	500 t/24 h
Jahr:	None

VOITH

Multifractor®, Sizes 110 to 310

Cost Savings by Fractionation

Screening, cleaning

The Multifractor® is a machine developed specially for splitting fibre mixtures into long and short-fibre fractions. Its mode of operation is based on a centrifugally directed flow with a high peripheral velocity. The superior features of the Multifractor® as compared with other fractionating machines are, in particular, its high selectivity and adaptability to different furnishes.

- Separate refining of the long-fibre fraction saves energy and results in improved stregnth values in comparison with compound refining.
- By separate dispersion of the long-fibre fraction in disc disintegrators and single-shaft disintegrators there is a distinct decrease in energy requirements as compared with full-flow dispersion with comparable homogeneity of the finished stock.
- Fully automatic control and checking of the waste paper furnish by adjustment according to the quantity of the short and long fibres. The patented control system guarantees constant quality of the finished stock even with greatly fluctuating qualities of waste paper.
